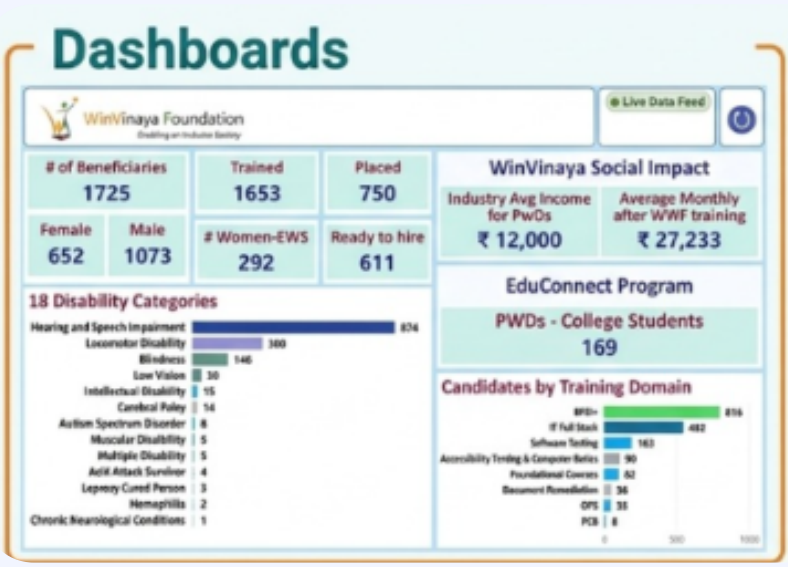
October - 2026

TOGETHER WE RISE

The official newsletter of WinVinaya InfoSystems



FROM OUR DESK

WE HAD AN INTERESTING OCTOBER

- **The data struggle:** An NGO director spends more time searching for data than using it to measure impact.
- **Training Spotlight:** A young accounts assistant discovered AI could cut his weekly report from four hours to forty-five minutes — something he had never known was possible before.
- **The invisible button:** On a stock trading platform we audited, the Buy button was invisible to screen readers, making it inaccessible to an investor with visual impairment.

Three very different problems.
One root cause: the tools exist, the data exists,
but something in between is broken.
This issue is about fixing that "in between."

“I Have the Data. I Just Can’t Find It.”

We keep hearing this.

An NGO collects data from **three districts, across two programmes, over eighteen months.** The data is solid. But it **sits in spreadsheets** that were **last updated by someone** who has since moved on, saved in folders that **four people named differently.**

Then a funder calls. Wants updated **impact numbers by Monday. And the weekend disappears.**

We have been **building MEL dashboards** — Monitoring, Evaluation and Learning — to fix exactly this. The idea is not complicated. Take the **data that already exists, put it in one place on the web, keep it current,** and let different people see what is relevant to them. The board sees **strategy**. The field team sees **operations.** The funder sees **outcomes.** Nobody emails spreadsheets around.

We recently **finished one for an NGO**, and the director said something nice — she pulled up the **dashboard on her phone during a donor meeting.** No preparation. The numbers were just there.

Corporates too: the same solution works. Sound familiar?

.

AI that matters:

Knowing where it helps and using it effectively.

Four Hours or Forty-Five Minutes?

Karthik, an Accounts Assistant with a locomotor disability, spent four hours every week on a summary report.

He came to our **GenAI training**

In a hands-on session, Karthik **discovered doors he did not know existed**:

- **Speak, don't type** — dictated notes became clean text
- **Faster documents** — rough notes became formatted, number-checked reports in minutes
- **Quick answers** — he asked questions of his own data instead of hunting through files
- **Smart automation** — one spreadsheet now auto-generates a form that used to take twenty minutes

That weekly report? It now takes 45 minutes. Our training is built on **hands-on practice and real tasks**, not slides and theory

Try this today: Pick one task that tires you. Ask AI to draft it. Then check every line.

Karthik's challenge was never ability. It was access — to the **right tools,** and **someone who showed him where the doors were.**

GenAI training for your team?

Madhu Wants to Invest.
Can Your Platform Let Him?

What if the "Buy" button simply isn't there for you?

Madhu is a **working professional** with money set aside to invest. He is also a **person with visual impairment,** and the brokerage platform he tried was built as if people like him do not exist.

The **"Buy" button had no label** — his screen reader could not find it. **Form fields were blank to assistive technology**. Keyboard navigation broke halfway through. Madhu did not lack financial literacy. He **lacked an accessible interface** — he should be making investment decisions, not fighting one.

WinVinaya recently completed **accessibility audits for SEBI-regulated stock brokerage companies.** Our **testing team includes persons with disabilities** who use these platforms every day: automated tools catch code errors, **our testers catch the barriers real people face.** With AI-assisted testing and human-in-the-loop screen reader evaluation, we **assessed navigation and keyboard access, form controls and labels, heading structure and link clarity, and screen reader compatibility** — and documented every finding with clear, actionable steps.

Is your platform accessible to every user? In financial services, e-commerce, education or healthcare, partner with us for audits, assistive technology testing and remediation

E-Mail: info@WinVinaya.com

Our Services:

We deliver practical, inclusive technology solutions across corporate and social sectors:

1. **GenAI Training & Adoption –** Hands-on training in prompting, productivity, automation, and AI-powered workflows.
2. **MEL Dashboards —** Live, role-based impact reports for donors and boards.
3. **Digital Accessibility Audits –** WCAG 2.1/2.2 audits for websites, applications, and digital platforms.
4. **Document Remediation –** Accessible PDFs, Word, and PowerPoint documents, including reports, textbooks, and learning materials.
5. **Digital Skills & Assistive Technology –** Digital literacy, screen-reader skills, workplace tools, and vocational training for persons with disabilities.

Practical solutions. Inclusive technology. Measurable impact.
